## PRODUCT DESCRIPTION

### Right-Angle Connector Bracket for Bridge-to-Frame Connection

The Showbird 65 Bridge Connector - A is a heavy-duty, right-angle bracket engineered to connect a horizontal bridge frame to a vertical Showbird 65 100x240 support frame. Designed specifically for use in overhead bridge configurations, this bracket ensures a flush, locked-in fit between structural elements to create stable and visually seamless passages or walkways within a modular display.

Constructed with precision-welded aluminum components housed in a white powder-coated casing, the bracket inserts directly into the internal channels of both the horizontal and vertical frames. Its L-shaped body delivers strong mechanical support while maintaining the clean design aesthetic of the Showbird 65 system. Ideal for custom exhibits, entry arches, and multi-zone display environments.

### Key Features:

- Designed to connect bridge frames to vertical Showbird 65 100x240 frames
- Creates strong, 90° corner support for elevated bridge configurations
- Precision-welded aluminum components within a white powder-coated bracket
- Clean fit into SEG channels for secure, flush connection
- Sold individually for flexible configuration needs

Build bold, architectural exhibit elements with the Showbird 65 Bridge Connector - A—the essential bracket for bridging form and function.
