## PRODUCT DESCRIPTION

### Bridge-to-Backwall Connector for Showbird 65 100x240 Frames

The Showbird 65 Bridge Connector - B is a right-angle bracket designed to attach a horizontal bridge frame to a Showbird 65 backwall, enabling dynamic overhead display configurations. When paired with Bridge Connector - A, it supports stable and secure bridge connections while maintaining the sleek, modular design of the Showbird 65 system.

Constructed with a precision-welded aluminum insert encased in a white powder-coated bracket, this connector slides directly into the SEG channels of both the bridge and backwall frames. Its clean-fit, tool-free design ensures fast setup and structural integrity.

Importantly, the Bridge Connector - B allows the bridge to be mounted at any position along the backwall—offering maximum flexibility in layout planning. Bridge locations are not fixed or limited, empowering designers to place overhead structures exactly where they're needed.

### Key Features:

- Connects horizontal bridge frames to Showbird 65 backwall frames
- Enables flexible placement—bridge can be mounted anywhere along the backwall
- Creates strong 90° connections for overhead bridge configurations
- Aluminum insert with white powder-coated exterior
- Slides into SEG frame channels for a clean, secure fit
- Sold individually

Achieve custom overhead designs with confidence using the Showbird 65 Bridge Connector - B—your versatile solution for modular bridge integration.
