

SEGO® H CONNECTOR

SEGO MODULAR LIGHTBOX DISPLAY

PRODUCT CODE: SEGO-HCON

PRODUCT DESCRIPTION

The SEGO® H Connector is a purpose-engineered accessory designed to elevate SEGO® Modular Lightbox configurations by enabling raised inline connections. Specifically crafted to work with a SEGO® 100 x 225 (39.4" x 88.6") frame positioned between two other SEGO® frames, the H Connectors seamlessly integrate into the display system to create visually striking and structurally secure setups.

The H Connectors are precisely sandwiched between the split vertical profiles of the outer frames, ensuring a flush and stable fit. The central SEGO® 100 x 225 frame then slides onto the posts of the H Connectors, locking into place to create a clean, elevated connection. This configuration results in an impressive 44.3" high opening at the bottom of the display, allowing for enhanced visibility, open sightlines, or creative use of space for walkways or product placement.

The SEGO® H Connector unlocks greater flexibility and design possibilities, allowing exhibitors and marketers to craft multi-level, engaging booth layouts that stand out on the show floor.

Key features:

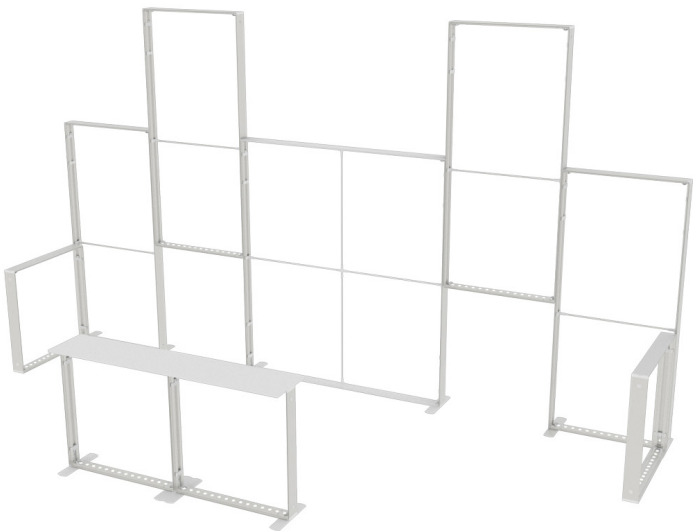

- Designed for raised inline connections between SEGO® Modular Lightbox frames
- Compatible with SEGO® 100 x 225
- Connects securely by sandwiching between outer frame vertical splits
- Creates a 44.3" high open gap at the base of the configuration
- Maintains the sleek, frameless look of the SEGO® system with seamless integration
