

SEGO® HIGH LOW CONNECTOR

SEGO MODULAR LIGHTBOX DISPLAY
PRODUCT CODE: SEGO-HLCON

PRODUCT DESCRIPTION

The SEGO High Low Connector is an essential accessory designed for the SEGO Modular Lightbox Display system, allowing you to seamlessly connect a 100x100 SEGO frame inline with a taller SEGO frame. This connector enables creative booth designs with varied height levels, enhancing visual interest and maximizing brand impact on the trade show floor.

For optimal stability and strength, pair the SEGO High Low Connector with the SEGO-SCON (Straight Connector), ensuring a secure and robust high-to-low inline connection between frames. This combination offers exhibitors flexibility to design multi-height lightbox backwalls or display structures that stand out from traditional flat-line configurations.

Ideal for use in custom booth layouts, retail displays, or branded environments, the SEGO High Low Connector helps transform standard SEGO components into dynamic, eye-catching exhibits with minimal effort and tool-free assembly.
