

SEGO® STRAIGHT CONNECTOR

SEGO MODULAR LIGHTBOX DISPLAY

PRODUCT CODE: SEGO-SCON

PRODUCT DESCRIPTION

The SEGO® Straight Connector is a specialized joining component designed to connect two SEGO® Modular Lightbox Display frames in a secure, linear (straight) configuration.

Key Features

Threaded Screw-On Mechanism

Unlike simple clip connectors, this straight connector is threaded on both ends, allowing each end to screw securely into the vertical extrusion channels of the adjoining SEGO® frames. This threaded design provides a stronger, more rigid attachment, reducing the risk of accidental separation or misalignment.

Enhanced Structural Stability

By screwing tightly into both frames, the connector reinforces the connection point, ensuring the joined frames maintain precise alignment and resist twisting or flexing — critical for large or multi-panel SEGO® walls.

Maintains Electrical & Visual Alignment

In addition to mechanical support, the connector ensures proper alignment of the internal LED systems, preserving seamless backlighting and uninterrupted graphic display across connected frames.

Discreet, Low-Profile Design

Once attached, the connector sits hidden within the frame's extrusion track, keeping the clean, frameless aesthetic that SEGO® lightboxes are known for.
